## Toyota Ireland recalls certain 'Avenxis', 'Corolla', 'Avenxis Verso' and 'Yaris' passenger vehicles

📅 SEPTEMBER 27, 2019

Toyota Ireland is carrying out a voluntary recall of certain Avenxis, Corolla, Avenxis Verso, and Yaris passenger vehicles. The vehicles were produced between February 2001 and July 2008.

A safety issue has been identified whereby it is possible that the vehicles are equipped with front passenger air bag inflators (Takata-designated SPI, PSPI, PSPI-L), as a "like-for-like" replacement under a prior recall, which contain a non-desiccated, phase stabilized ammonium nitrate propellant. According to Takata's reports, a defect related to motor vehicle safety may arise in the inflators due to propellant degradation occurring after prolonged exposure to high absolute humidity, high temperatures, and high temperature cycling. Activation of a non-desiccated ammonium nitrate inflator with degraded propellant may result in an inflator rupture. An inflator rupture may cause metal fragments to pass through the air bag and into the vehicle interior at high speed, which may result in injury or death to vehicle occupants.

The recall affects 11,943 vehicles in the Republic of Ireland.

### What to do:

Toyota Ireland will contact all affected vehicle owners by letter and advise them to make an appointment with their local Authorised Repairer where all necessary repairs and checks will be carried out.

If you believe that your vehicle may be impacted by this recall, then you can contact Toyota Ireland on **01 419 0200** or alternatively on the following [web form](#).
